

# SPRING IS COMING!

*We know it doesn't Feel like but it is*

## SPRING HOME MAINTENANCE TIPS

Turning houses into Dream Homes

### INSIDE

Test out your air conditioning system. If you wait for the first hot day to check your AC, there's chance it might not work and you'll have a long, hot wait before the repair it.

Remember to inspect/replace your HVAC filter monthly.

Check and clean the clothes dryer vent and stove hood.

If you have a coil-back refrigerator--you probably do--vacuum the coils at least twice each year. Your refrigerator will run much more efficiently with clean coils.

Clean everything, top to bottom! Use non-toxic soaps for better indoor air quality.

Clean up fallen limbs, branches other debris around the home to discourage wood-eating insects. Termites = bad.

Clean out basement window wells. Inspect/replace caulk on windows, doors, and other penetrations, such as dryer vents and cable wire holes.

Inspect the condition of the caulking where two different materials meet, for example where wood siding joins the foundation's wall or at inside corners. Improper caulking provides an avenue for moisture to get inside your walls and cause mold.

Check the condition of the exterior surfaces. Touch up any areas that need paint before they deteriorate further. Inspect bricks and concrete blocks for cracked mortar or loose joints.

Inspect grading around the house to be sure water drains away from the foundation on all sides. If water pools near the house, you could be in for a very wet basement and difficult spring removing water and even mold from the basement. Make sure that your lawn sprinkler heads do not spray the walls of the house. Water = bad.

Check your inside and outside foundation walls and piers for termite tubes and damaged wood.

### OUTSIDE

Inspect the roof for damaged, loose or blistered shingles. Have damaged shingles replaced if they're on less than 20% of the roof. Reroof if damaged shingles cover more than 20% of the roof.

Examine flashing around chimneys, vents, and roof edges.

Clean and inspect gutter. Ice can cause them to sag and become loose. Remove debris from gutters and downspouts and patch any holes. Make sure the downspouts direct water at least 5 feet away from your foundation walls.

Examine fascia or soffit boards. Replace if they are soft or rotting because they may allow rain into your attic.

Trim branches and shrubs that are touching your home which can provide a pathway for bugs or excess moisture to enter your home.

Remove dead branches that may fall on your home.

**Have us perform a Spring maintenance inspection**

**Free inspection and you'll get 5% off labor for the maintenance items in your report.**
